Dear Hiring Team,

I joined The Students Visa as a Software Engineer Intern and, over the years, grew into a Senior Software Engineer. Along the way I architected the multi-tenant platform that powers **ApplyForm.io**, a CRM used by education agencies and consultants worldwide, and engineered **Counselify.ai**, an AI-powered CV analysis product that uses LLM APIs to generate study-abroad recommendations for students.

My core stack is **React.js, Redux, Tailwind CSS and Spring Boot**, backed by working AWS experience with Lambda, SQS, EventBridge and S3. On the platform I designed a role-based access matrix, built an event-driven notification system that delivers SMS, email, Slack and WhatsApp messages, and shipped features across several customer portals. I also work comfortably with AI coding agents such as Claude Code and OpenCode, and have exposure to Next.js, TypeScript, Node.js / Express and PostgreSQL.

What I enjoy most is ownership: taking a feature from architecture through to production, and being trusted to make the calls in between. I write clean, maintainable code, and I do my best work in collaborative teams where that trust runs both ways.

I would welcome the chance to bring that same ownership to your team.

Best regards,

Dinith Rukantha
